U.S. Application No. 19/318,450 (Publication No. US 2026/0070232 A1)

Document 4: U.S. Patent No. 4,837,540 (“Document 4”)

First Named Inventor: Cardone Michele

Issue Date: June 6, 1989

Title: Magnetic work-holder

This document discloses a magnetic work-holder that is a magnetic holding device with pole members and single-pole extension members, including a movable pole portion with a work-holding face and guiding means, where slanted abutting faces form an angle with the holding surface. Its potential relevance to the claims of the above-identified application is set forth below.

Claim language (US 2026/0070232 A1)	Relevant disclosure of this document
Claim 1: “A magnetic gripper for gripping a ferromagnetic workpiece, said magnetic gripper comprising”	The reference discloses a magnetic holding device comprising a magnetically activable holding surface having pole members of different polarities, and at least a first and a second single-pole extension members for said pole members of opposite polarities. “A magnetic holding device, comprising magnetically activable holding surface having pole members of different polarities, and at least a first and a second single-pole extension members for said pole members of opposite polarities.” • Abstract
Claim 1: “the workpiece contact surface defines a contact surface angle between the workpiece contact surface and the displacement direction”	The reference discloses a movable pole portion of said pole extension members having an outwardly oriented work-holding face, and guiding means for guiding said movable pole portion on said base pole portion, where abutting faces of the base and movable pole portions are present. “said movable pole portion of said pole extension members having an outwardly oriented work-holding face, and guiding means for guiding said movable pole portion on said base pole portion, said abutting faces of the base and movable pole portions of ...” • Claim 1

Claim language (US 2026/0070232 A1)	Relevant disclosure of this document
Claim 3 (The magnetic gripper according to claim 1, wherein each pole shoe has an active structure for directing the magnetic field portion)	The reference discloses movable pole portions of pole extension members having an outwardly oriented work-holding face and guiding means for guiding said movable pole portion on said base pole portion. “said movable pole portion of said pole extension members having an outwardly oriented work-holding face, and guiding means for guiding said movable pole portion on said base pole portion ...” • Claim 1
Claim 4 (the bevel angle ranges in size from 5° to 85° or, in 15° to 75° or, preferably 40° to 60)	The reference discloses that said slanted abutting faces form an angle of between 15° and 80°, preferably between 40° and 50° with respect to the said holding surface. “A device according to claim 1, in which said slanted abutting faces form an angle of between 15° and 80°, preferably between 40° and 50° with respect to the said holding surface.” • Claim 2
